BINS. Large Volume Bins for collection and storage of fruit and vegetables.

Project For Building manufactures and sells Bins: plastic containers for the collection and storage of fruit and vegetables.

The caissons are molded in HDPE, a material that makes them particularly resistant to shocks, solar radiation and sudden changes in temperature, so they can be stacked both outside and in cold rooms. Furthermore, being completely non-toxic, they are suitable for food use.

The absence of edges in the containers means that the product inside them remains as intact as possible, take shelter from accidental damage, even during transport. The almost completely perforated surface of the Bins guarantees perfect ventilation inside, and avoids the stagnation of water on the bottom.
