

# AGRI gomma

Rubber matting  
for the wellbeing and care  
of horses and cows

**100%**  
*recycled rubber*

## DESCRIPTION

**AGRIGOMMA** is the innovative mat designed to give maximum comfort to the animal.

Developed through ongoing research into well-being, it ensures:

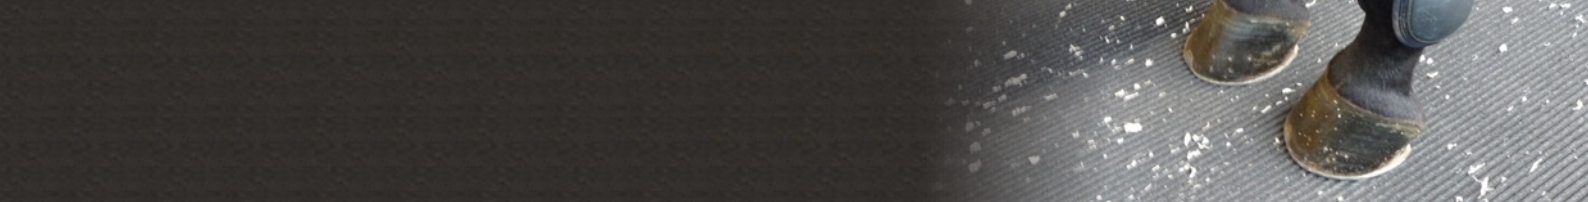

- improved **hygiene** for the environment and for the animal; as it is extremely easy and fast to clean the stall and the surrounding area, all organic fluids can be easily removed from the mattress, when using either the smooth or ribbed part.
- excellent **stability** for the animal, as there is excellent grip between the hoof and the surface, thanks to the mat's innovative composition which eliminates the risk of slipping and falling.
- **resistance** to the pressure exerted by the animals' hooves, especially when getting up; the mat does not move and will not warp.
- It is not susceptible to any kind of attack by organic and non-organic liquids.

There are also more practical aspects, connected to the well-being of the animal. For example, the product can be fully customised, both in terms of thickness and length; this contributes to improved hygiene, as combining many small mats would create a greater risk of organic liquids seeping below the product, which could result in the formation of mould and may produce bad odours. With a single piece the probability of seepage is virtually non-existent.

**It is ideal for use in stalls, litters, corridors, washing areas and horse walkers.**

Agrigomma is obtained by fusing two raw materials both in their second life, in full compliance with corporate policies envisaging the use of 100% recycled material. It is made of polyethylene, regenerated in-house, and ground rubber made from the tyres of scrapped cars.

VERSION	THICKNESSES	WIDTH	LENGTH
Smooth	10-15 mm	120 mm	made to order
Smooth	20 mm	80 mm	made to order
Ribbed	15-20 mm	120 mm	made to order

TECHNICAL DATA		
Density 800 kg/m <sup>3</sup>	Thermal resistance -20 + 80 C	Fire resistance F
